EDUCATION

Miami University

B.S. Computer Science & Engineering

Expected 2028

Talawanda High School

High School Diploma

May 2019

TECHNICAL SKILLS

Languages

Python, JavaScript, TypeScript, HTML5, CSS3, SQL

Frontend

React, Next.js, responsive UI development, form validation

Backend & APIs

FastAPI, Flask, Node.js, Express.js, REST APIs, session handling

Data & Tools

PostgreSQL, MongoDB, Docker, Git/GitHub, Postman, AWS EC2 (limited hands-on), Linux, ServiceNow

Engineering

Full-stack development, API integration, debugging, data validation, incident analysis

CORE STRENGTHS

- Incident response and escalation
- Remote technical assistance
- Infrastructure troubleshooting
- Application tool development
- Root-cause analysis
- Ticket and SLA management
- Customer communication
- Onboarding and knowledge sharing

PERSONAL SUMMARY

Software-development-focused technical professional combining enterprise operations experience with independently built full-stack applications. Builds with Python, FastAPI, Flask, React, Next.js, TypeScript, and databases. Developing NEXUS, a network incident intelligence platform for event correlation, affected-device analysis, root-cause investigation, and incident history. Brings troubleshooting discipline, user feedback loops, and ownership from concept through working demos.

WORK EXPERIENCE

Remote Technical Assistant (Associate I, Customer Experience)

Qualfon Data Services Group, LLC. / Forged Fiber 37

Remote | May 2026–Present

- Handle approximately 10–15 technician-support calls per day, documenting each interaction in Salesforce and maintaining an approximately 99% call-to-case ratio.
- Troubleshoot fiber installation, connectivity, and Q1000K/W1700 equipment issues, including misrouted fiber connections involving splitters and service legs.
- Use Opitus, ODIN, Salesforce, CMS, Adtran, XGS, SMx, and Calix to verify configurations, perform VLAN changes, provision or reset ONTs, and support service restoration.
- Work with field technicians through equipment and configuration issues, including cases requiring replacement hardware or additional diagnostics.

NOC Analyst

H5 DataCenters | Cincinnati, OH

June 2022–May 2025

- Monitored data-center and customer-server availability using internal status dashboards, Nagios, ping, and traceroute; handled approximately 15–20 tickets per 12-hour shift.
- Owned incident response during solo 12-hour shifts, coordinating with network engineering, data-center teams, and ISPs including Lumen/CenturyLink.
- Served as primary contact during a city-level power outage affecting multiple customer servers; created a master incident ticket and customer-specific tickets, communicated status, gathered diagnostics, and coordinated recovery calls over several hours.
- Investigated connectivity, firewall, access-point, latency, and server-reachability incidents; maintained ticket histories and shift handoffs.
- Trained 2 new analysts on ticket workflows, information gathering, diagnostics, incident-versus-outage handling, and escalation procedures.
- During downtime, followed up on and closed approximately 10–20 older high-priority tickets, improving documentation and customer-status visibility.

L1 Helpdesk Agent

ATOS | Mason, OH

August 2021 – May 2022

- Resolved or escalated approximately 10–20 support tickets per shift involving account lockouts, password resets, secure-login fob numbers, and user access issues.
- Provided first-level assistance through phone, email, and service-portal channels; investigated reported issues and communicated ticket updates.
- Supported operational monitoring of physical security and IT systems, escalating issues and informing internal teams.

ADDITIONAL EXPERIENCE

Lawn & Garden Associate

Lowe's • Hamilton, OH

Jan 2021 – Feb 2021

- Assisted customers with product selection and bulky-item handling; maintained department presentation, replenishment, inventory, and merchandising.

Customer Service Agent

RDI • Oxford, OH

Aug 2016 – Oct 2016

- Handled customer consultations and recommended telecommunications solutions; explained service options, processed records, generated quotes, and tracked service metrics.

SELECTED SOFTWARE PROJECTS

NEXUS — Network Intelligence & Incident Response Platform (In Progress; ~75% complete)

Next.js, React, TypeScript, FastAPI, PostgreSQL, Docker

- Building an end-to-end workflow that collects network events, correlates related device impacts, classifies incident severity, and supports root-cause investigation.
- Model direct and indirect device relationships to show what happened, when, and which network components were affected.
- Implemented investigator actions for incident investigation, resolution, and closure with timestamped state transitions and historical records to support review of recurring events.
- Validating correlation behavior and refining the frontend before public GitHub release.

Security Guard Reporting Application — Independent Project

Python, FastAPI, MongoDB, React, Next.js, Flask, HTML/CSS/JavaScript, Gmail SMTP

- Designed and built a working demo independently in approximately one month for a facility manager and security-guard walkthrough workflow.
- Implemented login-session checks, duplicate guard-name prevention, required-field and checkbox validation, and clear error handling.
- Generated email reports with guard identity, walkthrough notes, and login/submission date-time details; iterated with the facility manager through demos and feedback.
- Production deployment and ongoing guard adoption were not confirmed.

Customer Portal UI Redesign — H5 DataCenters (Self-Directed Initiative)

Ruby on Rails, CSS, JavaScript, jQuery

- Prototyped a modernized customer portal with clearer navigation, readable status updates, document links, ticket visibility, and an updated login presentation.
- Researched and applied Ruby on Rails, CSS, JavaScript, and jQuery alongside NOC responsibilities.
